## Requirements

A person who is going to submit incident reports and reports of significant cyber threats needs to register an account in the Reporting Portal and have authorisation delegated to their account from a registered signatory of the company.

Please see the [guides for the Reporting Portal](#) for more information.

The authorisation "DORA incident och cyberhot" is delegated to the user, for the company that is submitting the report (*submitting entity*). If there are any other companies affected by the incident (*affected entity*), no authorisation is necessary, only for the submitting company. However, affected companies should be entered into field 1.4, 1.5 and 1.6.

Submitting a report also requires access to the inbox for the email address entered in the contact form. This is to have access to the email notification containing important information, automatically sent from FIDAC.

Please see the [guide for FIDAC](#) for more information.

# Report an incident

The incident report according to the DORA directive is divided in three separate reporting modules in FIDAC:

- **Dora\_initial**  
The module should be submitted as soon as possible but within 4 hours after the incident has been classified as major, and 24 hours at the latest after the company was made aware of the incident.
- **Dora\_intermediate**  
The module should be submitted within 72 hours after the initial report was submitted.
- **Dora\_final**  
The module should be submitted within one month after the intermediate report was submitted.

The reporting modules are divided, named and numbered via *Unscheduled* in the menu in FIDAC, like the below screenshot.

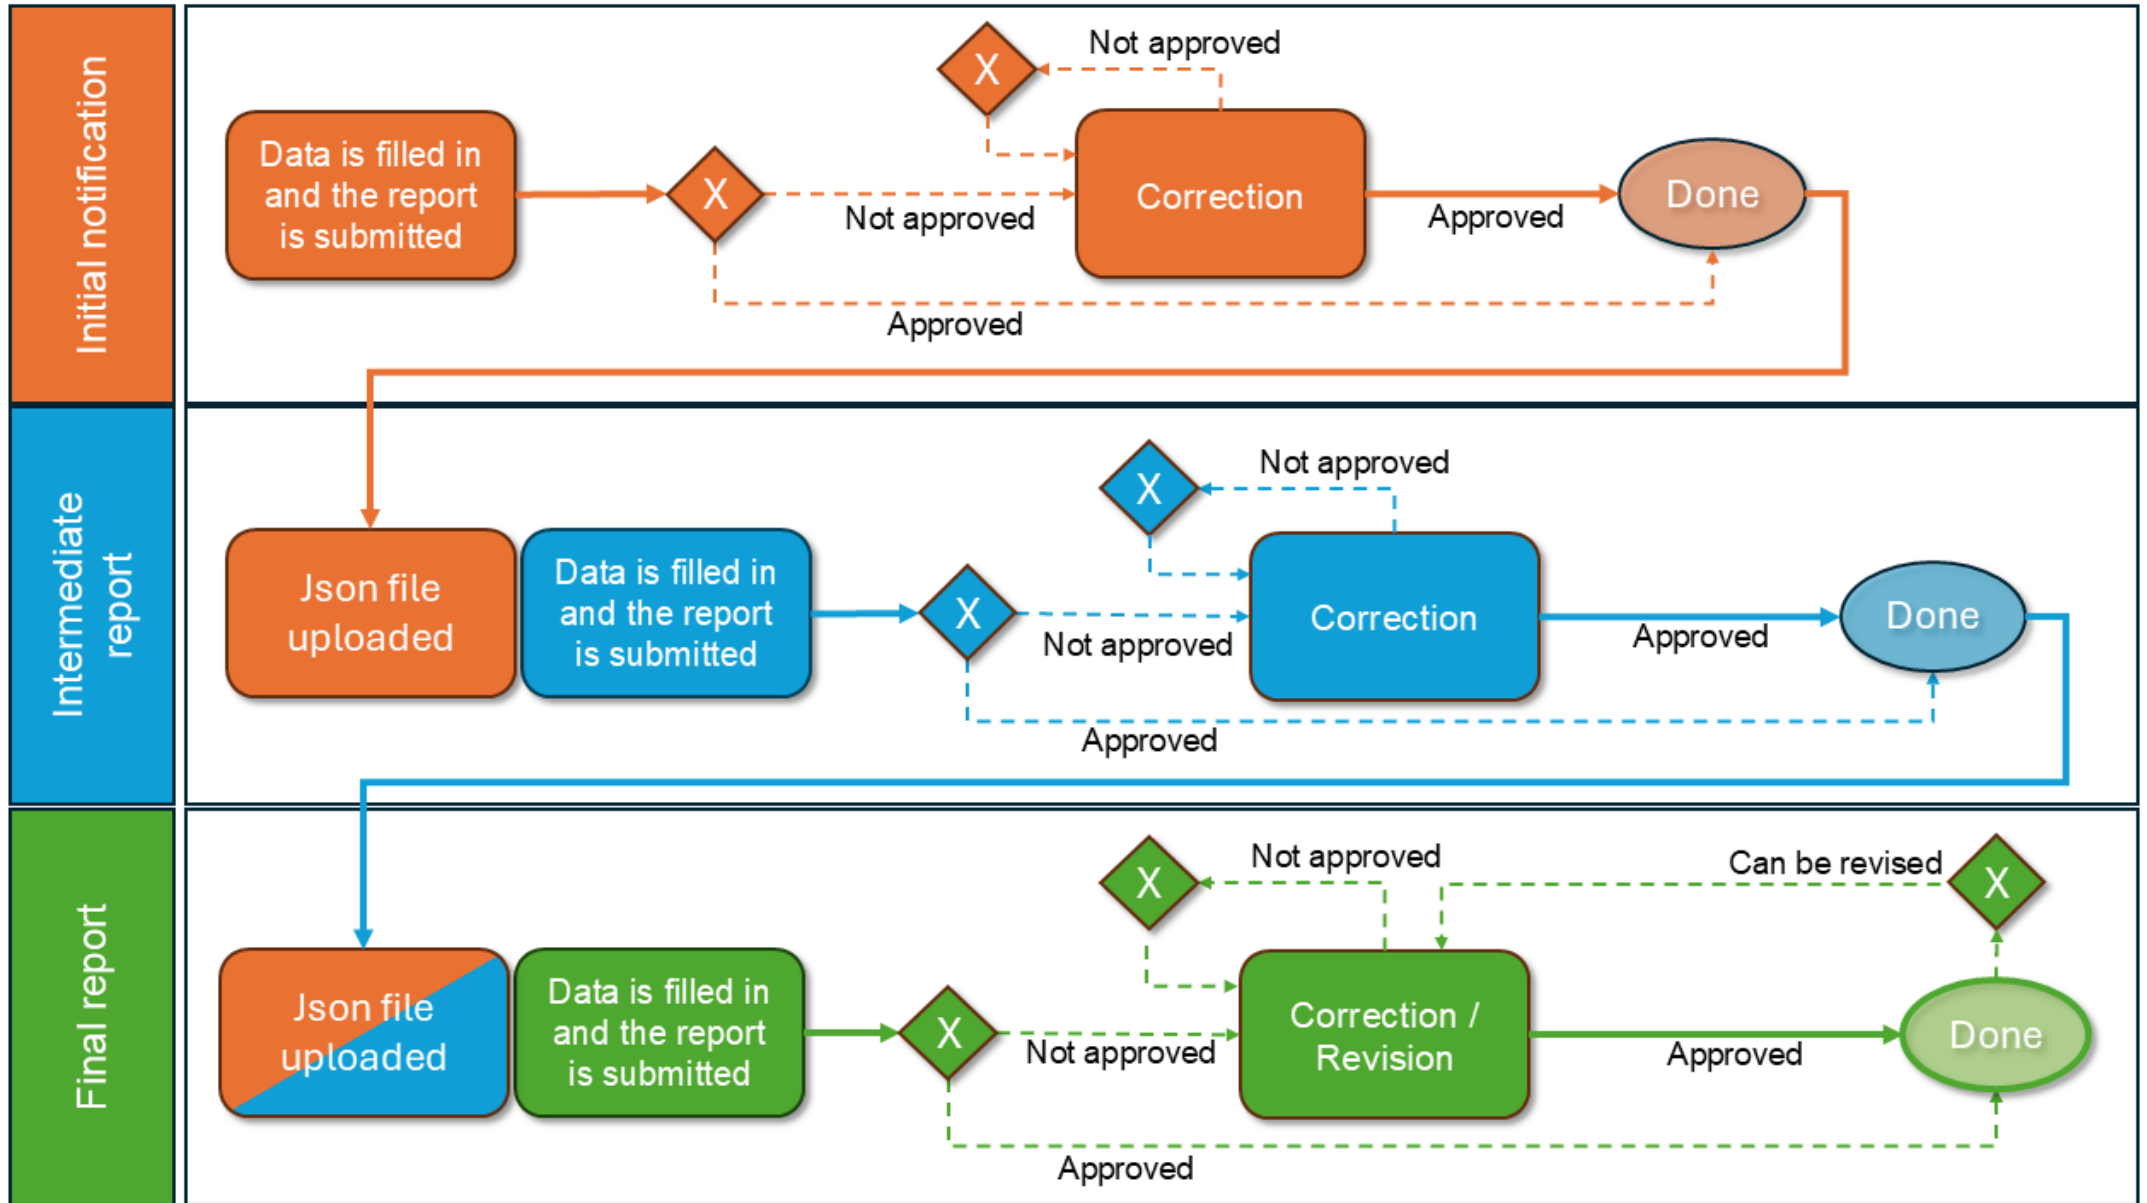

The screenshot shows the FIDAC Reports interface. On the left is a sidebar with a 'Portal' logo and four menu items: 'Scheduled', 'Unscheduled' (which is highlighted), and 'Unexpected'. The main content area is titled 'Unscheduled Reports' and includes a search bar. Below the search bar, there are four report categories, each with a list of report types and their associated formats:

- 1. Dora Initial**
  - 1. Dora Incident Initial Report (Web Form, JSON)
- 2. Dora Intermediate**
  - 2. Dora Incident Intermediate Report (Web Form, JSON)
- 3. Dora Final**
  - 3. Dora Incident Final Report (Web Form, JSON)
- Dora Cyber Threats**
  - Dora Significant Cyber Threats (Web Form, JSON)

To submit a new incident report, select *1. Dora Incident Initial Report* and then *Add New Report* in the top right corner. A form will then open.

Please see the flowchart on the next page, illustrating reporting of all three incident modules.

FLOWCHART FOR INCIDENT REPORTING

## INITIAL NOTIFICATION

Once the form has opened, click *Reporting Entity ID or Name* and select the company submitting the report.

Reporting Date\*  
04/27/2026

Reporting Entity ID or Name\*

Go to template

- Dora Incident Initial
  - General information about the financial entity
  - Dora Initial notification

When a company has been selected, you will be able to enter information into the form. Start by clicking *Type of submission* and select *initial\_notification*. *Major\_incident\_reclassified\_as\_non-major* is only selected after the *initial\_notification* has been submitted and if the incident is no longer classified as major.

	1.1

The forms appearance is based on the Excel template from ESMA. Complete the form by scrolling to the right.

### Column tips

Some fields have accompanied information in their column header, for example how date and time should be entered. However, the information is only available in Swedish. Click on the column header to see the information in a pop-up:

2.2	2.3
Date and time of detection of the ICT-related incident (Format: YYYY-MM-DDThh:mm:ss.OZ)	Date and time of classification of the incident as major (Format: YYYY-MM-DDThh:mm:ss.OZ)
Format för datum och tid: YYYY-MM-DDThh:mm:ss.OZ	180

The format for date and time have to follow the ISO-standard and is written for example like this: 2026-04-27T12:47:00.OZ

### Save and report

Once the report is completed, click *Download* to save the report as a Json file which will be reused for the next reporting module.

Finish by clicking *Preview* in the bottom right corner. If something is missing or has been incorrectly entered according to the schema validation, those fields will be marked in red. Correct any errors, click *Preview* again and then *Report*.

Enter the contact information and submit the report. The entered email address will receive an email notification which contain information about the report and a unique reference code.

Upload Report ✕

**Additional Data**

Provide some additional information with your report submission.

Namn\*

First and last name

Phone number\*

Phone number of responsible person

Email address\*

Email address (a confirmation email will be sent to this address)

← Back Next

**Email notification**

When the report has been submitted, an email notification will automatically be sent from FIDAC, to the email address entered in the contact form. The email contain information about the report was approved or encountered any validation errors, and details about the submission.

The details of the report is shown in the below example.  
It is important to save the reference code, marked in bold:

**Details about the submission:**

- Financial entity ID: 98100
- Financial entity name: Testbanken
- Data collection: 1. Dora Incident Initial Report
- Module version: dora\_initial\_v1
- Submission ID: 2026-0427-dc73-de58
- Reporting date: April 27, 2026
- Submission timestamp: April 27, 2026 08:37:40
- **Reference code: CAFIX0427dc73de58**

The reference code is used in the next two reporting modules, in order to keep the reports (Initial, Intermediate and Final) together.

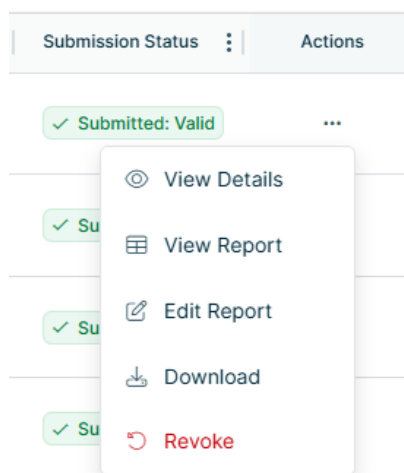

When the reference code is used in the Intermediate and Final reports, the same reference code will be included in the email notifications for those reports. In addition, the reference code is also included in the subject line of the email.

**Resume the report**

The downloaded Json file can also be used to resume the report at a later time. If the report has been partially finished, save the Json file by clicking *Download* and then close the form. At a later time, start a new report and click *Upload*, the saved data will automatically be filled in and you can continue. Once the remaining fields are completed, submit the report.

## INTERMEDIATE REPORT

Start by downloading the Json file from the Initial notification, either by opening the form and click *Download*, or via the symbol which is available to the far right of the row for the submission:

Then select the Intermediate report and click *Add New Report* to open the form. Click *Upload* in the form and select the Json file you previously downloaded.

The form is automatically filled with the data from the Initial notification, including the selected company. Before you start entering data, you must change the value for field 1.1. *Type of submission*, from *initial\_notification* to *intermediate\_report*:

	1.1
	Type of submission
	010
010	<input type="text" value="intermediate_report"/>
	<input type="text" value="major_incident_reclassified_as_non-major"/>

If you select *Dora Initial report*, the data from that submission will be available. If any data needs to be amended, go ahead and do so here.

### The reference code

Select *Dora Intermediate report* to continue the reporting. It is important that the reference code, from the email notification, is entered in field 3.1:

Reporting Date\*  
04/27/2026

Reporting Entity ID or Name\*  
98100

Go to template

Dora Incident Intermediate

General information about the financial entity

Dora Initial notification

**Dora Intermediate report**

### Dora Intermediate report

Show description

		3.1	3.2
		Incident reference code provided by the competent authority (Please use the reference code from the email notification)	Date and time of occurrence of the incident (YYYY-MM-DDThh:mm:ssZ)
		010	020
	010	CAFIX0427dc73de58	

< Collapse Sidebar

Preview

A validation rule will check to make sure that the entered reference code is corresponding to the previous submission Initial notification. The validation rule will be triggered after the Intermediate report has been submitted, if the entered reference code is not correct. If that happens, please make sure that the correct reference code has been entered and that there is no space included in the field.

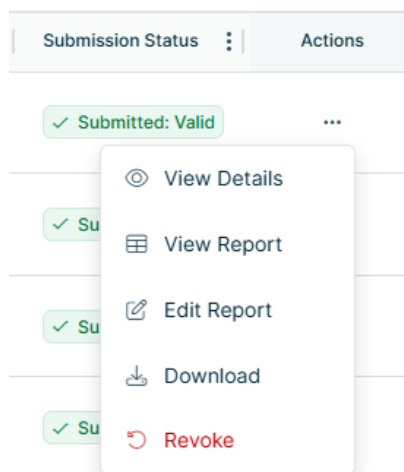

Complete the rest of the fields for the Intermediate report, click *Preview* and then submit the report.

### Resume the report

The downloaded Json file can also be used to resume the report at a later time. If the report has been partially finished, save the Json file by clicking *Download* and then close the form. At a later time, start a new report and click *Upload*, the saved data will automatically be filled in and you can continue. Once the remaining fields are completed, submit the report.

### FINAL REPORT

Start by downloading the Json file from the Intermediate report, either by opening the form and click *Download*, or via the symbol which is available to the far right of the row for the submission:

Then select the Final report och click *Add New Report* to open the form. Click *Upload* in the form and select the Json file you previously downloaded.

The form is automatically filled with the data from the Initial notification and Intermediate report, including the selected company. Before you start entering data, you must change the value for field 1.1. *Type of submission*, from *intermediate\_report* to *final\_report*:

	1.1
	Type of submission
	010
010	<div style="border: 1px solid black; padding: 2px;"> <div style="background-color: #0056b3; color: white; padding: 2px;">final_report</div> <div style="padding: 2px;">major_incident_reclassified_as_non-major</div> </div>

If you select *Dora Initial report* or *Dora Intermediate report*, the data from those submissions will be available. If any data needs to be amended, go ahead and do so here.

Complete the rest of the fields for the *Dora Final report*, click *Preview* and then submit the report.

**Resume the report**

The downloaded Json file can also be used to resume the report at a later time. If the report has been partially finished, save the Json file by clicking *Download* and then close the form. At a later time, start a new report and click *Upload*, the saved data will automatically be filled in and you can continue. Once the remaining fields are completed, submit the report.

## Revise an incident

The procedure to revise an incident report is somewhat different than for other reports in FIDAC. If there is need to revise an Initial report, then it have to be done when submitting the Intermediate report, in sheet Dora Initial report.

Reporting Date*		Dora Initial notification	
04/27/2026		Show description	
Reporting Entity ID or Name*		1.2	1.3a
98100		Name of the entity submitting the report	Identification code submitting the report
Go to template		010	020
Dora Incident Intermediate		010	A123BC
General information about the financial entity			
Dora Initial notification			
Dora Intermediate report			

In the same way, if the Intermediate report have to be revised, it is done when submitting the Final report, in sheet Dora Intermediate report.

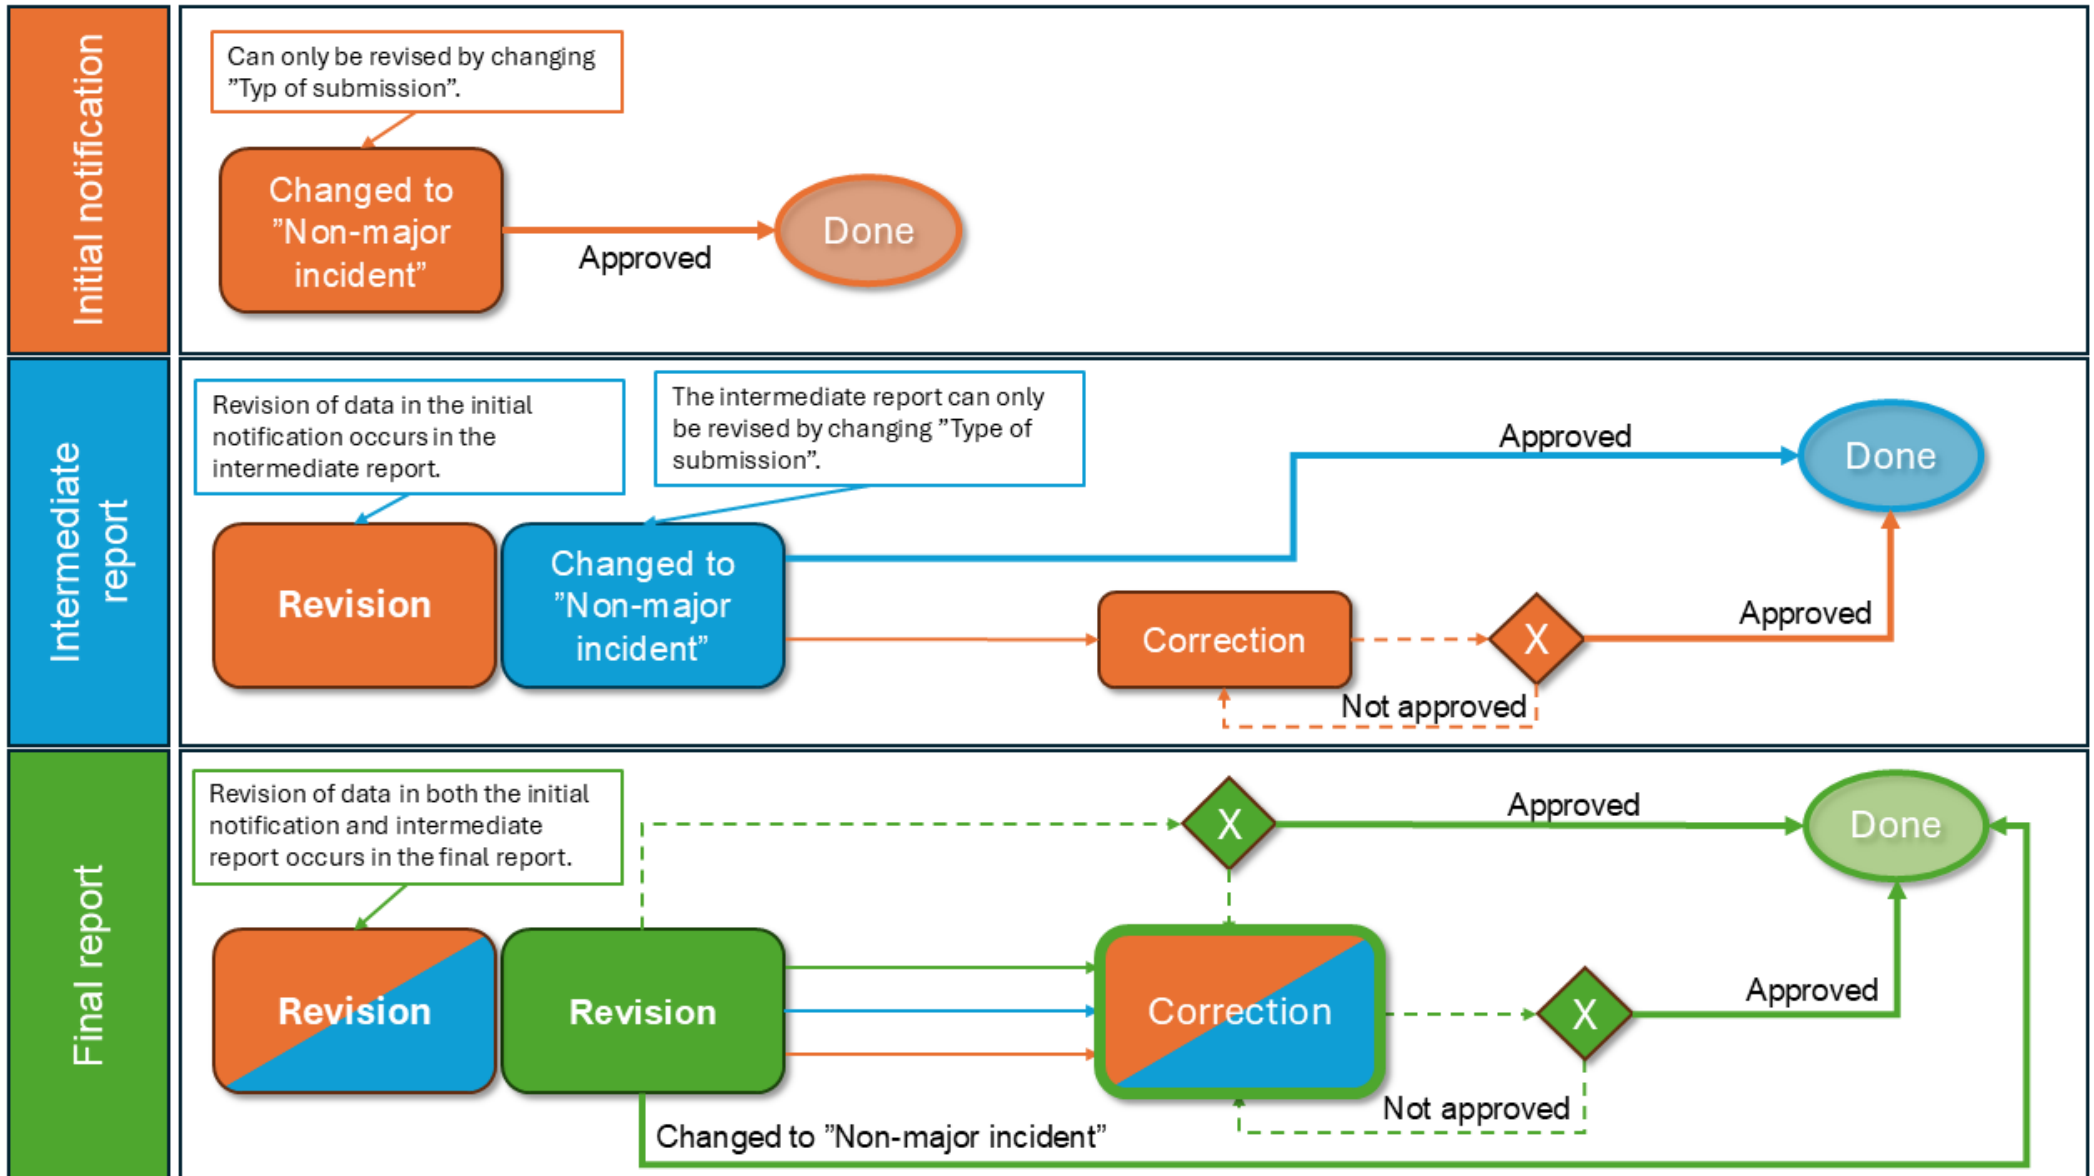

Reporting Date*		Dora Intermediate report	
04/27/2026		Show description	
Reporting Entity ID or Name*		3.1	3.2
98100		Incident reference code provided by the competent authority (Please use the reference code from the email notification)	Date and time of occurrence of the incident (YYYY-MM-DDThh:mm:ssZ)
Go to template		010	020
Dora Incident Final		010	2026-04-27
General information about the financial entity			
Dora Initial notification			
Dora Intermediate report			
Dora Final report			

If the Intermediate report data needs to be revised, it is done in the Final report.

There is however one possibility to revise both the Initial and Intermediate reports directly, and that is by reclassifying them as *major\_incident\_reclassification\_as\_non-major*, in field 1.1. Reclassification should only be selected if the incident no longer is considered as major.

Please see the flowchart on the next page, illustrating revision of all three incident modules.

FLOWCHART FOR REVISING A REPORT

## Revoke an incident

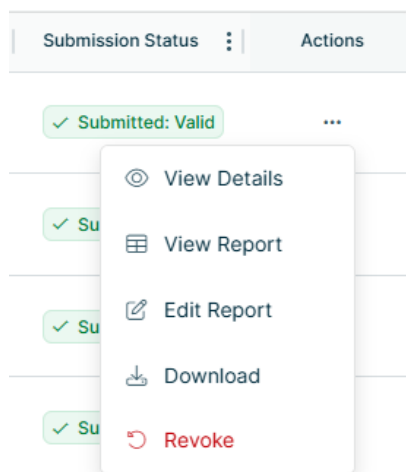

### RECLASSIFICATION

First and foremost, an incident should be reclassified as *major\_incident\_reclassification\_as\_non-major*. However, is reclassification is not a viable option, then the incident can be deleted.

### REVOICATION

If a mistake for example has been made, such as the same incident has been submitted in two different Initial notifications with the same data, then one of them can be revoked.

For the report that is to be revoked, navigate to column *Actions* to the right and select *Revoke*.

Enter a reason for revoking the report and click *Revoke*. The status symbol for the submission will change to "Submitted: Processing", then change to "Submitted: Valid". In the column *Revision Status* it will now say "Revoked" and an email notification will be sent to the email address entered when first submitting the report.

# Report Significant Cyber Threats

The report for Significant Cyber Threats according to the DORA directive is submitted in a separate reporting module in FIDAC. Select *Unscheduled* in the menu in FIDAC, select *Dora Significant Cyber Threats* and click *Add New Report* in the top right corner to open the form.

The report itself is only one sheet. Click *Reporting Entity ID or Name* and select the company submitting the report. Data can now be entered into the fields.

**Significant Cyber Threats report**

Show description

	1	2a
	Name of the entity submitting the notification	Identification code of the entity submitting the notification (LEI)
	010	020
010		

< Collapse Sidebar  
 Clear Form  
 Download  
 Upload  
 X Cancel  
 Preview

Finish by clicking *Preview* in the bottom right corner. If something is missing or has been incorrectly entered (schema validation), those fields will be marked in red. Correct the fields, click *Preview* again and then *Report*. An email notification will be sent to the email address entered in the contact form.

Unlike the incident reports, there is no reference code used for Significant Cyber Threats since it is only one single reporting module.

## RESUME THE REPORT

The downloaded Json file can also be used to resume the report at a later time. If the report has been partially finished, save the Json file by clicking *Download* and then close the form. At a later time, start a new report and click *Upload*, the saved data will automatically be filled in and you can continue. Once the remaining fields are completed, submit the report.

# Other information

## SHEET DESCRIPTIONS

For each report, there is a description available in certain sheets, accessible in the top left corner of the form:

### Dora Final report

 Show description

The information displayed is specific to the selected tab, but applies to the entire report (for example, date and time format). There are also specific descriptions. The example below describes how the reference code is used in the current tab.

Unfortunetaly, the information is only available in Swedish.

**Beskrivning**

**Intermediate report**

**Referenskod**

Säkerställ att referenskoderna från Initial- och Intermediate-rapporterna överensstämmer med koden som angivits fält 3.1 "Incident reference code provided by the competent authority" för Final-rapporten. Säkerställ att inga blanksteg följer med.

**Datum och tid**

Fälten för datum och tid fylls i enligt formatet YYYY-MM-DDThh:mm:ss.OZ

**Tid**

Fälten för tid fylls i enligt formatet DD:HH:MM

## DATE AND TIME

The format for date and time is quite specific. Date consists of year, month and day which are separated with a hyphen, followed by a T. Time consists of hours, minutes and seconds, which are separated by colon, followed by a dot and then OZ (a zero and Z). Broken down it looks like this:

YYYY-MM-DD T hh:mm:ss. OZ

Fields with date and time have to follow this format. An example could look like this:

2025-03-10T09:42:00.OZ

## UTC

OZ means "zero offset" and is referencing UTC (Coordinated Universal Time). This means that time is according to timezone 0, which means that the time for an incident should subtract one hour for wintertime (Sweden, UTC +1) and two hours for daylight-saving time (Sweden, UTC +2). If the incident originated in another country than Sweden, find out the time zone for that country (according to UTC) and subtract or add hours accordingly. An example:

Time of incident:	09:42:00
Time of incident according to UTC (wintertime):	08:42:00
Time of incident according to UTC (daylight-saving time):	07:42:00

Fields consisting of only time are simpler, the format is days, hours and minutes, separated by colon:

DD:HH:MM

Nothing more is needed. Hours can be entered up to 23 and minutes up to 59, a day is represented by initial an 01. An example could look like this:

01:23:59
